PROJECT BRIEF

Client:	The Airplanes and pilots associations	Deadline:	11:59pm, 10 Nov,2020
Project Name:	Project Brief	Author:	Prabhjot

THE ASK
What is the objective of the project? Here you need to define the problem: the need statement that you have chosen to address, the target audience (who the apps users will be) And describe your solution: what your mobile app will be and how it meets the need statement
Mary, Licensed pilot needs a way to make flight planning easy of her preference, so that she can enjoy her flight. This mobile app will help them to fill in default value in the log form. also you can save the information to avoid filling details again and again. Moreover, The navigation log value will display the result, which can be changed.
What are the deliverables? Here you need to define your minimum viable product - exactly what it will include (you should include the number of screens and what would be on each screen). And describe your three additional features - exactly what they will be (and whether they will be embedded on existing screens or if they will add screens to the app). List them in order of priority.
In this app, it will show Three main screens; 1.Digital navigation log Form (Fill and save the values in the log form). 2. Automatic wind drift correction (by filling the value and shows result accurately). 3.Result based upon Navigation Bar (display the result based upon navigation log bar).
